

RS team 3 (Backend)

Project:

COMP90082 - Software resources for CIS subject

About:

With the rapid evolution of software technology, including frameworks, testing, and deployment tools, there is a need for a repository of high-quality software engineering resources. University of Melbourne students need access to videos and tutorials so they can learn the tools effectively. There should also be the possibility of having a discussion about the learning resources. A SWEN90013 project in 2020 developed a prototype that needs extensions and modifications. Therefore, the project team focuses on developing functionalities, modifying operational logic, bug fixing, testing, data validating, and code refactoring.
